

Do you know which **AI tools** your business is using?

Get visibility into AI usage across your organisation, so you can make informed decisions about what to approve, review and govern.

AI Governance as a Service(AIGaaS)

AI tools can enter your business through everyday downloads, browser extensions and online services often outside IT's view. IT Anywhere's AIGaaS helps uncover that usage and turns it into clear, actionable reporting.

See what's in use

Discover AI tools across your endpoints and network.

Identify what needs attention

See which detected tools are approved, unapproved or awaiting review.

Make informed decisions

Use clear reporting to guide your next steps in AI governance.

CONNECTING BUSINESS WITH TECHNOLOGY

IT Anywhere (Pty) Ltd - All Rights Reserved.

Complete Visibility into AI tool usage across your organisation before it becomes a risk

AI adoption is accelerating inside every organisation, and much of it is happening outside IT's view. Employees are downloading AI tools, installing browser extensions, and connecting to AI APIs and services without approval, tracking, or safeguards. **AIGaaS**, IT Anywhere's AI Governance-as-a-Service offering, detects, classifies, and reports on AI tool usage across your environment - giving you a clear, structured foundation for AI governance.

Full endpoint visibility

Detects installed apps, IDE plug-ins, CLIs, browser extensions, and portable executables - the AI tools traditional monitoring misses.

Network-level AI visibility

Identifies AI usage over network traffic, surfacing browser-based and API-level access to AI services endpoint tools can't see alone.

Classification & risk tagging

Automatically classifies detected AI tools by category, vendor, and model family, turning raw detections into structured, governable insight.

Compliance & audit ready

Delivers evidence of AI usage tracking to support POPIA, HIPAA, PCI DSS, GDPR, and cyber insurance requirements - organised and ready when auditors ask.

A new layer of managed governance

AI governance becomes part of your service plan: usage reporting, risk reviews, and policy recommendations, delivered on a regular cadence.

IT Anywhere (Pty) Ltd - All Rights Reserved.

How it works

From blind spot to governed, in three steps

AIGaaS is available as a standalone service or alongside our other IT services, giving new and existing clients access to AI governance without needing to change IT providers.

Discover

We activate AI visibility across your managed endpoints and network, with no disruption to your team.

Classify

Every detected AI tool is automatically categorised, vendor-tagged, and flagged by risk and approval status.

Govern

You receive regular usage reports, risk reviews, and policy recommendations you can act on - and evidence ready for auditors.

Four capability pillars working together

AIGaaS brings AI governance to every managed environment through four integrated capabilities, from detection through to reporting you can act on.

Endpoint AI tool detection

- Installed apps, IDE plug-ins, CLIs, browser extensions & portable executables
- Lightweight, delta-only reporting - no performance impact on managed devices

Reporting and Queryability

- Scheduled usage reports delivered by your IT Anywhere account team
- Plain-language reporting - built for decision-makers, not just IT

Classification and Governance

- Automatic categorisation by AI type, vendor & model family
- Approval status tagging: approved, unapproved, or under review
- High-risk usage flagged immediately for review and action

Network-based AI visibility

- Access to AI SaaS platforms, API providers & model hosting services
- Browser-based AI usage detected even without local installation
- Complements endpoint detection for full-coverage visibility

Why AIGaaS through IT Anywhere

Whether you already work with us or are looking for a managed IT partner, IT Anywhere brings your endpoints, network, security and AI governance together under one team.

AIGaaS gives you visibility into AI risks that often go unseen, with guidance from a team that understands your business. It's a natural part of a more complete IT service without the complexity of juggling separate vendors, extra agents or another dashboard to manage yourself.
